Coder 1

Theme	Code	Description	Example
Perceived risks of AI	*Negative impacts on cognitive development*	Sentence expresses concern over usage of AI in classrooms on children's development	"While AI may strengthen pattern recognition and adaptability, unbalanced use may limit sustained attention, emotional regulation, and interpersonal communication." CA page 3/4
	Data privacy & security	Sentence expresses concern about privacy and security with AI usage by administration or students	California page 3/4
	Overpersonalization of AI	Sentence expresses concern about AI that appears too life like or outputs are too directly influenced by the given user	California page 3/4
Motivation for AI guidance	*Increased accessibility of AI tools*	Expresses need for guidelines given that AI is now easily accessible	Connecticut
	Integration into other tools	Expresses need for guidelines given that AI has been integrated into other tools	Connecticut
	AI Literacy	Expresses need for guidelines that support AI literacy	"AI literacy is essential for all members of the school community, including educators and students." California page. 2/17
	Acceleration of AI innovation	Expresses need for guidelines given that AI is quickly developing	Connecticut
Perceived benefits of AI	*Efficiency*	Sentence describes a benefit of AI is helping to streamline or make certain tasks more efficient	"Streamlining administrative tasks" Alaska page 2

Examples of AI use	*Adaptative learning platforms*		California page 2
	Tutoring systems		California page 2
	Classroom chatbots		California page 2
	Simulations		California page 2
	Assessment models	Usage of AI to evaluate or help evaluate student performance, competency, and understanding	California page 2
Types of AI	*Generative AI*		
	Agentic		
	General AI (hypothetical)		
Directives for administrators	*AI literacy for the community*	Directive states that schools / districts should make information on AI usage accessible and AI literacy accessible	“Parents and students should be given multiple opportunities to learn about the laws and policies that impact their rights when AI tools are used in the classroom.” California 6/17
	Privacy policy updates	Sentence encourages enhancing school / district policies on privacy or provides an example of what should be in those privacy policies	“Districts should take actionable steps to create a robust security posture for generative AI. • Review and amend existing data privacy and acceptable use policies to address the unique risks of generative AI. • Establish simple "Do's and Don'ts" for daily AI use, such as using anonymized data in prompts and never uploading documents containing confidential school or district information” Alaska page 9

	Broadening incident-reporting protocols	Directive involves including incident-reporting for AI	"Considering appropriate and ethical use of AI tools, schools should consider broadening existing incident-reporting protocols to include misuse of technology." Connecticut. page 5
	Plagiarism policy updates	Sentence encourages enhancing school / district policies on plagiarism or provides an example of what should be in those plagiarism policies	"Policies should clarify how to appropriately attribute Al-generated content and require students to disclose when and how Al was utilized in their work. This includes requiring students to cite Al-generated content appropriately." Alaska page 7
Directives for teachers	*Specific questions to consider before implementing*	Sentence or paragraph discusses questions the teachers should consider before implementing AI into a given scenario.	"Questions that LEAs should consider when vetting, adopting, and implementing AI tools include, but are not limited to: How will we ensure compliance with local policy and state/federal laws related to data privacy, transparency, equity, and parental/student rights?" California page 4/4
	Examples of curriculum for AI literacy	Examples of lessons that can be done in the classroom to help learn about AI	California page 2/17
	Unacceptable uses of AI in academic settings	Prohibited uses of AI	California
	Privacy related directive	Directions for promoting and maintaining data privacy in classroom uses of AI	"Personally identifiable information (PII) should only ever be entered into closed AI systems since open AI systems do not contain the protections required to ensure that PII will be protected as required by law and best practice." California page 2/10

Citations			
References to existing law	*Reference to state law*	Sentence makes direct citation to a state law of the same state that AI election bill comes from.	
	Reference to federal law	Sentence makes direct citation to a federal law	

Memo/Notes:

- Thinking about what is really interesting and what do we want to know? What is a good takeaway that we would want our results to investigate?
    - Directives: so then we can investigate if directives get put into practice anywhere in the state (measuring effectiveness of guidelines)
    - Resources: what kinds of resources (citations) shape state government education departments' approach to AI?
    - Teacher needs: do guidelines incorporate needs that teachers have expressed in previous literature (I cant code for this right now as I haven't read previous literature exploring this)
- Do we care what they cite as their own information? For example California's "The World Economic Forum Future of Jobs Report 2025 (PDF) reinforces this urgency, identifying AI and big data as the fastest growing skill areas, alongside networks, cybersecurity, and technology literacy." or do we only care for what they cite towards as a *resource* to be used by teachers? How do we want to distinguish between those 2 in name if we do both?
    - We can use in-vivo coding too for these to count how many get cited

- Things im currently finding most interesting
    - Examples of AI related curriculums - and who should be teaching it? In which class subjects?
        - For example, CA has a lot of examples of actual AI usage in the classroom while Alaska doesn't
        - Also, there is a difference between curriculum that uses AI vs curriculum that builds understanding of AI
    - Examples of types of AI (mainly in the introductions)
    - Who the guides are for (teachers vs parents vs admin)
        - For example, it seems the CA one is very teacher focused
    - Unacceptable uses of AI in academic settings
    - Privacy and data
        - This is a space that is very interesting currently, as there seems to be a gap in privacy and security for language models, thus it's interesting to see if directives align with concerns of privacy scholars
- Some codes seem to be repetitive that are on Atlas? Like "governmental" and "governmental source" both under citation
