FORWARD FOCUS

The Maine Department of Education approaches new technologies using an asset-based lens. We know that technology, once adopted by the masses, becomes a part of education. Technology prohibitions prevent students from learning critical skills to function in today's technology-enriched society and do not prepare them for the reality they will face as they move beyond their primary education. Recognizing this, Maine DOE focuses its efforts on exploring the impact of technology on individuals and groups to assess how to best support the healthy and safe use of it. From providing guidance on digital well-being to exploring what skills students need to be prepared for upcoming advancements in technology, there are overarching skills that are both necessary and relevant to all technology use; by focusing on these foundational principles, the Department works to ensure that all students and educators are equipped and prepared to effectively engage with technology as it changes and develops.

This AI Guidance Toolkit is designed to empower the confident integration of AI tools and foundational knowledge in Maine classrooms, preparing our students to thrive in an AI-influenced world. This toolkit is designed to help empower schools to make informed decisions about AI in education technology and contains critical information for anyone engaging with AI that sets foundational understandings for the effective integration of AI in education and beyond.

Ethical AI Integration in Education

OVERVIEW

Return to Main Menu

AI in Education

AI Explained

Ethics and AI

AI Foundations

As AI use becomes more prevalent in education, it's essential to ensure responsible and transparent use. Schools should consider the following practices as part of their education technology culture.

- Promote Ethical Practices
- Teach Critical Thinking
- Empower Human Agency
- Commit to Lifelong Learning
- Model Ethical Behavior

Together, we can empower students to not only use AI effectively but also approach it with care and responsibility. The information ahead provides strategies, resources, and examples to help foster a culture of ethical AI use in education.

Ethics and AI

AI Foundations

BACK

MAKE YOUR OWN MAGIC

AUTHENTICATE

A

Authenticate through inquiry.

- Is it authentic for your voice or task?
- Is it my work or work that is appropriate to use?
- Does it enhance and not replace?"

Maine DOE

To be authentic is to be real, true, or genuine.

Engage in the process and refine the output to align with your voice and intended goal.

Be a part of the process and critically evaluate AI's output:

- Did I make meaningful changes to the AI-generated content (the AI didn't just generate the product/answer for me)?
- Does this work represent my knowledge and effort?
- Would I be comfortable explaining how I used AI in the process?
- Is the way I used AI appropriate for the task?

When authenticating your work...

- Does it enhance and not replace the work I'm doing?
- Does this overrepresent my abilities?
- Is it my work, or work that is appropriate to use?

Still not sure... try substituting "My Friend" for AI then ask if it's ethical:

- My friend wrote my essay and I turned it in... Is that ethical use?
- My friend helped me create an outline and then I used that outline to write my essay. Is that responsible use?
- My friend helped me correct spelling and grammar before I turned my essay in. Would you allow this?

This could work in more scenarios than just "My friend"

- A teacher used a lesson from Teachers Pay Teachers, reviewed it, and modified it for their students. Is that okay?
- A teacher found a template and used the template to write emails to parents. Is that ethical?

NOTE

Note key elements of your usage.

- How did you use the AI
- Did it help your thinking?
- Do you need to disclose that you used AI?
- Do you need to cite the AI?

Understanding AI Disclosure

AI is an emerging technology, and there is ongoing discussion about how to disclose its use responsibly.

What is AI Disclosure?
AI disclosure means being transparent about when and how AI has been used to create, enhance, or used in your work.

Why Does It Matter?

- Encourages Ethical Use– Helps students and staff use AI responsibly.
- Promotes Accountability – Ensures clarity about what was AI-assisted versus human-created.
- Builds Trust & Integrity – Creates transparency in academic and professional work.

Teaching students how and when to disclose AI use helps them navigate the evolving digital landscape with honesty and responsibility. Explore the elements below to learn more about AI disclosure:

Getting Started

AI & Academic Integrity

AI for Teaching

AI for Learning

BACK

GETTING STARTED:

Why Teach AI?

- The Future is Already Here
- AI Can Enhance Teaching & Learning
- Equity
- Building Critital Thinking & Ethical Awareness
- The Pace of Change is Rapid

Why Start Now?

- The earlier students are introduced to emerging technologies, the more confident and skilled they will become.
- Schools that integrate emerging technologies set their students—and their communities—up for success in a fast-changing world.
- By meaningfully integrating emerging technologies into education as soon as they become available, we prepare students for the jobs, challenges, and opportunities of tomorrow.

AI and other emerging technologies are not just the future—they are today's reality. By teaching and learning about them now, we can empower students to be leaders, innovators, and informed citizens in a rapidly evolving world.

view.genially.com

WHAT IS SAMR?

“Embracing AI within the SAMR framework isn’t about replacing teachers; it’s about amplifying their impact.”

~ Becky Keene via *Ditch That Textbook*

Read Keene’s excellent AI+SAMR article via ***Ditch That Textbook***

S

Substitution

Technology replaces analog with no change in function/purpose.

A

Augmentation

Technology acts as a direct substitute but with functional improvements.

M

Modification

Technology allows for a significant redesign of the task or tasks.

R

Redefinition

Technology allows for the creation of tasks, previously inconceivable.

Check out more examples of AI and SAMR from Tim Evans

Substitution and Augmentation are considered **Enhancement**, while Modification and Redefinition are thought of as **Transformation.**

TEACHING & LEARNING

Return to Main Menu

Getting Started

AI & Academic Integrity

AI for Teaching

AI for Learning

BACK

Maintaining academic integrity with AI begins with open conversations about its ethical and responsible use at the classroom, school, and district levels. AI can enhance learning and creativity, but students and educators need to use it thoughtfully to ensure that work remains authentic and reflects their individual skills and knowledge. By openly discussing AI's role, setting clear guidelines for appropriate use, and promoting transparency, schools can encourage students to use AI as a support rather than a substitute for original work. This collaborative approach to academic integrity helps build a foundation of respect for intellectual property, and responsible technology use. It prepares students for ethical engagement with AI throughout their educational journey.

HOW DO WE START THESE CONVERSATIONS?

BACK

HOW CAN I USE AI FOR TEACHING?

Educators already have a well-stocked toolbox and AI is simply another tool to enhance teaching and learning. Explore how AI can become an integral part of your teaching toolbox.

Are you worried you'll have to reinvent the wheel? Check out these good teaching practices that are "AI-resistant."

The expectations around use of AI in the classroom need to be transparent for both teachers and students.

CLEAR EXPECTATIONS

Maine DOE

- Lesson Planning
- Accessibility
- Ethical Use & AI Literacy
- Student Engagement
- Assessment and Feedback
- Other

...AI is going to give us the most precious, most valuable, most sought-after resource for educators... time. AI is going to give us time.

-AI for Educators, John Spencer

Image generated with DALL-E

view.genially.com

Clear Expectations

- Whether you are using AI in your classroom or not, it is important to establish clear expectations for the appropriate use of these tools.
- Consider using a chart like this in your classroom and refer to it when assigning work.
- Remember to use AI purposefully and intentionally to provide your students with the best instruction while preparing them for the future.

Depth of Knowledge	Blooms Taxonomy	#	AI Use	Description of AI Use
DOK 1 Recall	Remembering	1	NO AI	Students complete the task without AI assistance, relying entirely on their knowledge, understanding, and skills.
DOK 1 Recall	Understanding	2	AI-ASSISTED IDEA GENERATION AND STRUCTURING	AI can be used to brainstorm, structure, or generate ideas, but the final submission must be the student's original work.
DOK 2 Skill/Concept	Applying	3	AI-ASSISTED EDITING	AI is used to refine and edit the student's work for clarity, grammar, and style, with the original work provided for comparison.
DOK 3 Strategic Thinking	Analyzing	4	AI TASK COMPLETION HUMAN EVALUATION	AI completes specific tasks within the task, with students critically evaluating and discussing the AI-generated content.
DOK 4 Extended Thinking	Evaluating & Creating	5	FULL AI WITH HUMAN	AI is used throughout the task as a co-pilot, with students collaborating with AI to generate original, creative solutions. The process should be reflected on.

AI for Learning

WHY AI FOR LEARNING?

In today's digital world, educators must embrace AI in the classroom to prepare students for a technology-driven future. Integrating AI into education supports Future-Ready Student Competencies, which encompass Artificial Intelligence, Computer Science, Digital Citizenship, and Cyber Safety.

Digital Leadership fosters responsible and ethical technology use, while Computational Thinking equips students to solve complex problems through logical reasoning and data-driven decisions. Grounding these practices in digital citizenship and cyber safety ensures students approach AI with an understanding of privacy, equity, and ethics.

By becoming Ethical Creators, students learn to innovate responsibly, leveraging AI to enhance creativity while remaining mindful of its limitations and biases. Engaging with AI also prepares students to be Engaged Leaders who can adapt to changes in the tech landscape and take initiative.

These competencies enable students to become not just consumers of technology but thoughtful contributors, critical thinkers, and problem-solvers. By embracing AI, educators enrich learning experiences and build a strong foundation for students to thrive in an ever-evolving world.

1. DIGITAL LEADER

A digital leader effectively utilizes digital tools, platforms, and resources to access, evaluate, create, and share information. This skill encompasses responsible navigation of technology, self-directed learning, and adaptability to new digital environments. A digital leader has an understanding of how technology works and can make informed decisions grounded in their knowledge of computer science and digital citizenship.

Check out these quick activities to see how digital leadership fits into Computer Science, Digital Citizenship and AI.

2. COMPUTATIONAL THINKER

A computational thinker can break down complex problems into smaller, manageable parts, identify patterns, create step-by-step solutions (algorithms), and focus on key details while ignoring irrelevant information. In the classroom, a computational thinker applies these skills across subjects, whether it's solving math problems, conducting science experiments, or analyzing patterns in literature. This mindset helps students approach challenges logically, think critically, and develop problem-solving strategies that are effective in both digital and real-world scenarios. By integrating AI into computational thinking activities, educators provide students with hands-on experience using technology to solve problems efficiently and creatively, building essential skills for future digital environments.

Check out these quick activities to see how computational thinking fits into Computer Science, Digital Citizenship, and AI.

4. CLEAR COMMUNICATOR

Clear communication involves expressing thoughts, ideas, and information in a way that others can easily understand, whether verbally or written. Students practice skills during class discussions, where they articulate their ideas thoughtfully, and through writing assignments, logically organizing their thoughts. Active listening, sharing ideas, and offering constructive feedback are learned in group projects. Presentations develop oral communication skills, teaching them to convey complex information. Students must also communicate digitally, through emails, messages, and collaborative platforms, ensuring their written communication is concise and purposeful. By integrating AI tools thoughtfully, educators can help students enhance their clarity in both verbal and written communication, equipping them with essential skills for academic success and real-world interactions.

Check out these quick activities to see how clear communication fits into Computer Science, Digital Citizenship, and AI.

5. ETHICAL CREATOR

An ethical creator is someone who uses AI and tech thoughtfully to promote ideas and innovation inclusively and ethically. Ethical creators use technology to share information and can highlight biases, ensuring that their creations respect diverse perspectives and use inclusive language. An ethical creator also engages in reflective practices asking critical questions such as, “Did I use all sources responsibly?” and “How could my content impact others?” Through these actions, they maintain integrity and remain mindful of the responsibilities that come with digital content creation.

Check out these quick activities to see how ethical creation fits into Computer Science, Digital Citizenship, and AI.

6. EFFECTIVE COLLABORATOR

An effective collaborator is someone who works well with others, contributing to group efforts, communicating effectively, and supporting the team's goals. This skill involves active listening, clear and respectful communication, empathy, and constructively resolving conflicts.

In a K-12 classroom, fostering effective collaboration is essential for preparing students for real-world scenarios where teamwork is crucial.

Check out these quick activities to see how effective collaboration fits into Computer Science, Digital Citizenship, and AI.

LEADERSHIP

Return to Main Menu

AI for Leadership

Policies & Best Practices

Fostering a "Healthy Tech" School Culture

Student Data Privacy

1 Why Now?

- AI is already shaping education – Teachers and students are using AI, whether or not districts have policies in place.
- The workforce is evolving – AI literacy is a necessary skill for students' future careers.
- Efficiency and Innovation – AI can enhance educator productivity, streamline administrative tasks, and personalize learning.

Schools that embrace AI early can lead the way in responsible and effective implementation.

2 Why Not Wait?

- AI is not a passing trend – It's rapidly integrating into everyday tools and workflows.
- Reactive vs. Proactive Leadership – Waiting means playing catch-up, rather than shaping AI use with purpose and equity in mind.
- Missed Opportunities – AI can support strategic goals in equity, accessibility, and efficiency now.

Delayed adoption can lead to unstructured AI use, widening digital divides, and missed chances to enhance education.

3 The Role of Leaders

- Setting the Vision – Clearly define AI's role in learning, teaching, and school operations.
- Building Capacity – Provide professional development and AI literacy training for educators.
- Ensuring Ethical Use – Establish guidelines for responsible and equitable AI implementation.
- Fostering a Culture of Innovation – Encourage safe exploration of AI while setting guardrails.

Leadership isn't just about AI policies—it's about vision and culture.

RESPONSIBILITY

R

Establish an AI Accountability Group

School Administrative Units may consider...

- Forming a dedicated team to develop and oversee accountability frameworks for AI use.
- Ensure responsible, ethical, and effective AI implementation.
- Align AI use with district goals and community values.

OVERSIGHT

O

Develop AI Policies and Procedures

School Administrative Units may consider...

- Creating policies or guidelines for AI use.
- Conducting regular evaluations of AI tools and practices.
- Ensure alignment with education goals, ethical standards, and emerging technologies.

OPPORTUNITY

O

Enhance Education Through AI

School Administrative Units may consider...

- Reflecting on approaches to AI use, prioritizing enhancement over replacement of educational experiences.
- Building a strong foundation of AI literacy for educators and students.
- Empowering users to navigate and leverage AI effectively.

TRANSPARENCY

T

Promote Transparency and Data Accountability

School Administrative Units may consider...

- Create a comprehensive communication plan to engage all stakeholders.
- Emphasize transparency and trust in AI use.
- Develop a structured approach for managing relationships with AI vendors.
- Ensure accountability for data security and ethical AI practices.

SUSTAINABILITY

S

Establish Sustainable AI Practices

School Administrative Units mayconsider...

- Focus on sustainable AI practices to support long-term well-being of schools and students.
- Align AI implementation with strategic planning and resource allocation.
- Prioritize ongoing professional development for effective AI integration.

OVERSIGHT

0

Develop AI Policies and Procedures

School Administrative Units may consider...

- Creating policies or guidelines for AI use.
- Conducting regular evaluations of AI tools and practices.
- Ensure alignment with education goals, ethical standards and emerging technologies.

OVERSIGHT

This might look like:

- **Choosing and Evaluating Tools**
  - Ensure alignment with district policies and regulations around data privacy.
  - Assess whether tools are being used effectively and meeting user needs.
- **Starting Small**
  - Address immediate concerns.
  - Pilot tools/practices to make informed decisions.
- **Implementing Practices**
  - Develop and recommend policies, procedures, and acceptable use (lean into existing Policies).
  - Work in stages, starting with immediate concerns, and then developing knowledge and sustainability.
  - Create a district belief statement around AI.
- **Ensuring Equity and Ethics**
  - Address equitable access and the digital divide.
  - Minimize bias and prioritize human-centered decision-making.
  - Protect privacy and security.
- **Ongoing Research and Development**
  - Monitor AI implementation to ensure alignment with ethical and educational goals.
  - Monitor unintended consequences.
  - Identify where AI can enhance existing district initiatives.
  - Learn and understand AI and AI Literacy for yourselves.

Consider what you want to put into place:

Policy (Big P)

- School Board Policy refers to formal policies that must go through a defined process for approval and implementation.

policy (Little p)

- Includes handbooks, guidelines, school or classroom-based Standard Operating Procedures (SOPs), and other practices that align with big "Policy." These can be adjusted more quickly but cannot contradict overarching policies.

Procedures/Protocols

- Written agreements detailing how to implement a policy. These are developed collaboratively with multiple stakeholders, including student voices, to ensure inclusivity and practicality.

Practices

- The day-to-day actions educators take with their students. These are typically not written but are designed by educators to address the specific needs of their students and curriculum requirements.

view.genially.com

OPPORTUNITY

0

Enhance Education Through AI

School Administrative Units may consider...

- Reflecting on approaches to AI use, prioritizing enhancement over replacement of educational experiences.
- Building a strong foundation of AI literacy for educators and students.
- Empowering users to navigate and leverage AI effectively.

OPPORTUNITY

Maine DOE

Harnessing the opportunities of AI in education may include:

- Enhancing Education
  - Use AI to complement, not replace, educational experiences.
- Integrating AI Literacy
  - Teach students about AI and how to use it responsibly, incorporating developmentally appropriate practices across all grade levels.
  - Embed AI literacy into all subjects, focusing on responsible use rather than solely highlighting risks.
  - Check out "What is AI Literacy" here.
- Preparing Students for the Future
  - Equip students with skills to be informed and ethical AI users.
- Supporting Teacher Innovation
  - Encourage and showcase teachers' innovative uses of AI, highlighting successes.
- Purposeful AI Use
  - Implement AI thoughtfully and with clear educational objectives, avoiding use for its own sake.

We have to recognize that there are both opportunities and challenges. Here are some challenges to consider.

view.genially.com

TRANSPARENCY

T

Promote Transparency and Data Accountability

School Administrative Units may consider...

- Create a comprehensive communication plan to engage all stakeholders.
- Emphasize transparency and trust in AI use.
- Develop a structured approach for managing relationships with AI vendors.
- Ensure accountability for data security and ethical AI practices.

TRANSPARENCY

Maine DOE

Building trust through transparency may involve policies that:

- Clear Communication
  - Provide students with guidance on when and how to use AI. Check out the clear expectation charts in the "Teaching and Learning" section to help educators set clear expectations for the classroom.
  - Clearly explain how and why AI is used in classrooms.
- Transparent Use
  - Define how AI usage will be shared, such as through reflection or citation.
  - Foster a culture of openness about AI implementation.
  - Foster a healthy technology school culture. Check out that section for tips.
- Data Privacy and Protection
  - Ensure families, students, and staff understand how data is collected, used, and safeguarded.
  - Require vendors to disclose details about their AI systems, including potential biases.
- Stakeholder Education and Feedback
  - Educate all stakeholders about AI and its implications. Check out some resources you can use to educate stakeholders.
  - Promote healthy tech use by creating informed users.
  - Establish feedback loops for ongoing input and addressing concerns about AI experiences.

view.genially.com

SUSTAINABILITY

S

Establish Sustainable AI Practices

School Administrative Units mayconsider...

- Focus on sustainable AI practices to support long-term well-being of schools and students.
- Align AI implementation with strategic planning and resource allocation.
- Prioritize ongoing professional development for effective AI integration.

SUSTAINABILITY

Maine DOE

To ensure sustainable AI practices that support the long-term health of schools and students:

- Adopt Scalable Solutions
  - Start small with immediate concerns, but plan for future growth aligned with district needs.
- Budget Strategically
  - Determine whether to allocate funds specifically for AI tools.
- Keep Humans Central
  - Avoid over-reliance on AI by prioritizing human oversight and decision-making.
- Stay Adaptive
  - Regularly review and update policies to keep pace with technological advancements.
- Invest in Professional Development
  - Train educators and staff to adapt to and effectively utilize emerging technologies.

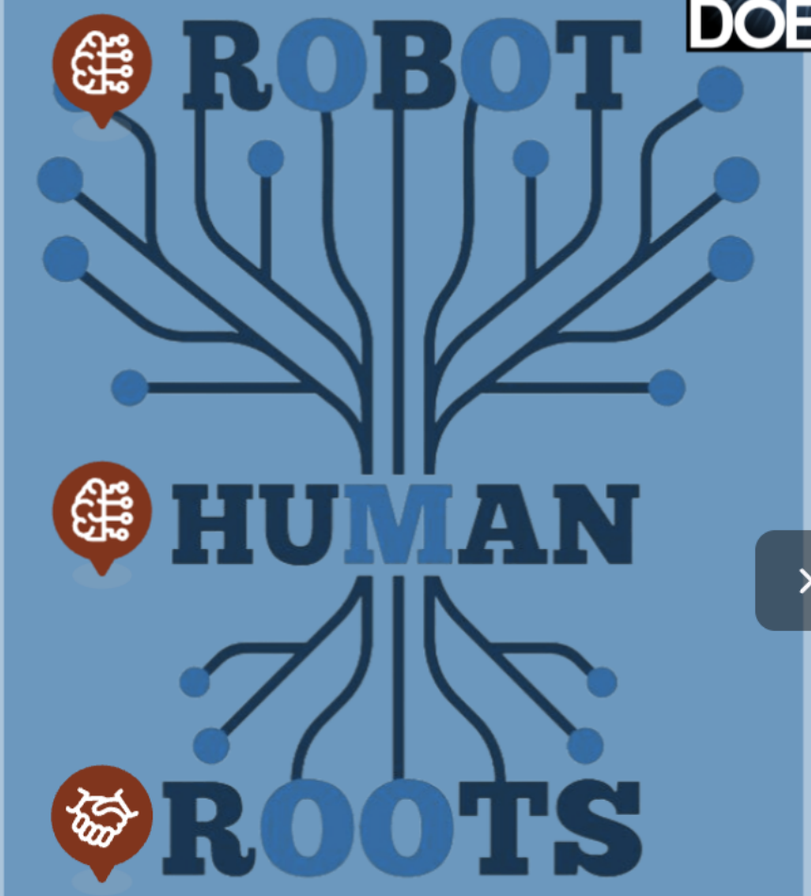
view.genially.com

The acronyms **HUMAN**, **ROBOT**, and **ROOTS** offer a comprehensive framework for understanding and integrating AI in education with a focus on ethics, practical application, and community.

- HUMAN emphasizes the ethical and responsible use of AI, **teaching** students and educators to **H**alt, **U**tilize, **M**onitor, **A**uthenticate, and **N**ote when engaging with AI.
- ROBOT, in contrast, centers on the technical aspect of AI interaction, guiding **learning** through the art of prompting and refining AI outputs via a five-part framework: **R**efine, **O**ptimize, **B**uild in Checks, **O**utline, and **T**est.
- ROOTS extends the conversation by grounding AI use within **community and policy** contexts, emphasizing the importance of equity, access, and a shared commitment to values-driven innovation through **R**esponsibility, **O**versight, **O**pportunity, **T**ransparency, and **S**ustainability.

Together, these frameworks intersect to ensure that AI in education is not only a tool for productivity and creativity but also a force for cultivating informed, responsible, and inclusive practices among students and educators alike.



GROUND POLICY IN COMMUNITY ROOTS

"Healthy Tech" School Culture

Maine DOE

By fostering clear expectations, responsible habits, creativity, and collaboration, schools can build a healthy, engaging, and sustainable technology culture that benefits everyone.

Resources for a "Healthy Tech" School Culture:

- Getting the Most out of Using Tech in the Classroom. Common Sense Media
- Values and Tech: Fostering a Positive Digital Culture in Your School. Common Sense Media
- How a School's Culture Impacts Edtech. ISTE
- Check out the Maine DOE Learning Through Technology Team for Technology Professional Development

A "Healthy Tech" School Culture Might Include:

1. Foster a Mindset of Exploration & Creativity
2. Set Clear Technology Expectations
3. Teach Digital Citizenship & Protect Student Data
4. Support Educators with Professional Development
5. Involve Students & Families

Fostering a "Healthy Tech" School Culture

Student Data Privacy

STUDENT DATA PRIVACY

Maine DOE

Student data privacy refers to the protection of sensitive personal information about a student, including their academic records, contact details, and other identifiable data, by ensuring its responsible collection, use, sharing, and safeguarding from unauthorized access, in accordance with legal regulations and ethical practices within an educational setting; essentially, it's the right of a student (or guardian) to control how their personal information is collected and used by schools and educational technology platforms.

Data Types

Personal Identifiable Information (PII) refers to data that identifies or distinguishes an individual student. This could include names, addresses, birthdates, etc.

Student data can also include grades, attendance records, medical information, and sometimes even biometric data.

Regulations

- (FERPA) Family Educational Rights and Privacy Act
- (COPPA) Children's Online Privacy Protection Act
- (CIPA) Children's Internet Protection Act
- (DPA) District Policies and (AUP) Acceptable Use Policies
- **(IDEA)** Individuals with Disabilities Education Act

Considerations

The increasing use of educational technology and online platforms raises concerns about data breaches and the potential misuse of student information by third parties

BEST PRACTICES

Ethics

Responsible handling of student data includes ensuring transparency about data collection, minimizing unnecessary data collection, and providing students and parents with access to their information.

Data Privacy as a Part of Digital Citizenship:

- Digital Citizenship Resource Platform: Safety, Privacy, and Digital Citizenship
- Common Sense Media Privacy Program

A SMALL START TO DEVELOPING AI VOCABULARY

A selection of **SOME** key terms to know.

Algorithm - is a set of detailed instructions or rules assigned to perform a specific task or solve a problem, like a recipe or formula for computers.

(AI) Bias - is when a computer program makes unfair choices or assumptions because it learned from data that wasn't fair to begin with.

Data Mining - the process of analyzing datasets to discover new patterns that might improve the model.

Chatbot (bot) - is like a robot you can text with on websites or apps, designed to answer your questions or chat with you, making it seem like you're talking to a real person, but it's a computer program using rules or AI to figure out what you're saying and how to respond.

Generative AI - is a type of artificial intelligence that can create new content. This content could be anything from text, and images, to music. Instead of analyzing or recognizing existing data, generative AI uses patterns and information it has learned to produce something new.

(AI) Hallucinations - are when artificial intelligence models, particularly generative models, produce output that is inaccurate, distorted, or entirely fabricated.

Large Language Model (LLM) - an AI model that has been trained on large amounts of text (data) so that it can understand language and generate human-like text.

Neural Network - is a deep learning technique designed to mimic how our human brain learns and makes decisions, using many connected parts to recognize patterns and solve problems.

Prompt - structured information given to a machine to generate a requested output.

Predictive AI - refers to systems that use data analysis and machine learning algorithms to anticipate outcomes or behaviors based on patterns in past data, enabling proactive decision-making and personalized recommendations.

Supervised Learning - is a method where algorithms learn from labeled training data, using it to predict outcomes or classify information based on input-output pairs. It's like teaching a machine using a detailed answer key, enabling it to make accurate predictions or decisions when faced with new, similar data.

Unsupervised Learning - is a type of machine learning where the algorithm analyzes and finds patterns in data without any predefined labels or instructions, effectively learning the structure of the data on its own.

Navigating AI Tools in a Rapidly Changing Landscape

As AI tools continue to evolve at a rapid pace, it can feel overwhelming for PK-12 educators to keep up. New platforms emerge, features change, and updates roll out faster than ever. Rather than focusing on mastering every tool, educators should prioritize developing foundational AI literacy, understanding ethical considerations, and identifying how AI can support teaching and learning.

Instead of chasing the latest tool, ask:

- Does this tool align with my instructional goals?
- Is it accessible, ethical, safe, and student-friendly?
- Does it enhance learning rather than replace critical thinking?

By focusing on principles over platforms, educators can confidently adapt to new tools as they come and go, ensuring AI is used thoughtfully and effectively in the classroom.

Check out our AI Tools Directory.

AI Tools & Resources

BACK

Resource	Purpose/Use Case
Common Sense Education	Common Sense Media is a nonprofit organization that provides educators, parents, and students with resources to promote digital citizenship, media literacy, and safe technology use. It offers age-appropriate reviews of media and technology, as well as curriculum and guidance on topics like AI ethics, online safety, privacy, and responsible digital engagement.
ISTE	ISTE (International Society for Technology in Education) is a nonprofit organization that supports educators, leaders, and students in using technology to enhance learning. ISTE provides professional development, research-backed standards, and instructional resources focused on digital citizenship, AI in education, innovation, and technology integration. Their resources include ISTE Standards for Students and Educators, AI guidance, lesson plans, webinars, and conferences, helping schools navigate the evolving role of technology in education.
CSTA	CSTA (Computer Science Teachers Association) is a professional organization dedicated to supporting K-12 computer science educators. CSTA provides curriculum resources, professional development, networking opportunities, and research-based standards to help teachers integrate computer science education effectively. Their resources include the CSTA K-12 Computer Science Standards, lesson plans, workshops, and conferences, all aimed at promoting equitable and high-quality computer science education for all students.
Office of Education Technology	The Office of Educational Technology (OET) at the U.S. Department of Education supports the integration of technology in education to enhance teaching, learning, and equity. OET provides policy guidance, research, and resources on topics such as AI in education, digital equity, personalized learning, and cybersecurity. Their initiatives, including the National Educational Technology Plan (NETP) and reports on AI and digital learning, help educators, administrators, and policymakers navigate the evolving role of technology in schools.

THANK YOU!

Congratulations on making it to the end of the AI Roadmap Toolkit!

Embracing AI in education takes curiosity, effort, and a commitment to continuous learning. By taking the time to engage with this toolkit, you've demonstrated a deep investment in staying ahead and making informed decisions that will have a lasting positive impact.

Thank you for doing the hard work, for asking the important questions, and for being a leader in shaping the future of education. Your efforts matter, and they will make a significant difference for the students you serve.

Keep learning, keep leading, and keep inspiring!

"If we teach today as we taught yesterday, we rob our children of tomorrow."

– John Dewey, 1916
