Version History

Given the quickly evolving landscape of artificial intelligence (AI) technology, it is expected regular updates will be made to this document to incorporate the most recent guidance and any policy developments or changes at both state and national levels. To facilitate the tracking of these updates, a summary table has been integrated into the document. This table specifically outlines the updates and changes made in each new iteration, providing a clear and accessible record of the document's progression.

Date	Description of Changes	Version
12/2024	Information and examples were added to all sections regarding professional development, social emotional learning, district exemplars, and data privacy	1.1
6/2024	Initial document created	1.0

Roadmap:

Looking forward to the next iteration of this resource, the committee will continue to communicate and collaborate with different partner groups across the educational, library, and industry landscape. We will continue to explore the WISELearn OER to house AI resources. Look for the next iteration in 2025.

Finally, this resource will continue to be monitored and updated when there are new advances in AI Technology that affects schools and libraries, when state and/or federal policies are enacted relating to AI, and/or when new trends emerge around AI in education.

Foreword

Since before the global pandemic, Wisconsin's educators have been dedicated to effectively integrating instructional technology to transform educational delivery. With the advent and growing integration of Artificial Intelligence (AI) in K-12 education, new challenges have emerged. The responsible, ethical, and safe use of AI in teaching and school operations statewide not only embodies our commitment to innovation but also enhances educational pathways across Wisconsin's schools, libraries, and communities. The Wisconsin Department of Public Instruction proudly accepts its role in providing guidance and recommendations for this integration, ensuring that AI tools are used to their full potential to support educational excellence.

The success of this initiative hinges on the active involvement and support of students, families, teachers, and community members throughout the state. By prioritizing human inquiry and reflection in the use of AI, we aim to maintain a balance where technology aids learning while human insight remains paramount. This strategy ensures that our educational practices remain equitable and sustainable, preparing our students for a future where technology is central, and Wisconsin continues to be a leader in educational innovation and quality.

Executive Summary

Wisconsin's K-12 and Library AI Guidance

The Wisconsin Department of Public Instruction has developed this evolving guidance document to assist K-12 educators, librarians, students, and administrators in effectively integrating Artificial Intelligence (AI) technologies within educational settings and public libraries. This guidance is regularly updated to ensure its alignment to the latest advancements in AI technology, ethics, and policy, promoting the responsible use of AI to enhance personalized learning, foster critical thinking, and improve educational outcomes.

Key goals include supporting districts in their work toward developing policies for ethical AI use, enhancing data privacy, and adopting a human-centered approach to AI application. The document emphasizes understanding AI formats like Machine Learning (ML) and Generative AI (GenAI), including tools such as ChatGPT and DALL-E. A summary table of updates (version history) will be maintained to ensure partners have access to the most current information.

This guidance addresses concerns such as equity, ethical use, data privacy, and advocating for responsible AI integration. It outlines strategies for engaging diverse partners, including educational sessions and continuous communication, to foster an inclusive approach to AI. Additionally, it highlights the need for infrastructure upgrades and professional development to support effective AI use in education.

Core Concepts and Goals

AI in K-12 Education and Lifelong Learning through Public Libraries

Artificial Intelligence (AI) encompasses technologies and systems capable of processing vast amounts of information, sensing, reasoning, acting, or adapting like humans, but with the speed and accuracy of computers. Machine Learning (ML), a subset of AI, involves machines autonomously extracting knowledge from data, learning from it, and making informed decisions. Generative AI (GenAI) uses ML to create new content, such as images, text, audio, and video, based on user inputs. (Google, 2024)

AI as a Tool

AI technologies, particularly Generative AIs, can enhance personalized learning and educational exploration. Quality of AI output depends on the quality of input, necessitating explicit teaching on using AI effectively.

AI can simulate real-world scenarios, offering low-risk opportunities for students to practice self-awareness, self-management, and social-awareness skills. Virtual reality and other AI-supported interfaces enable students to engage with coping strategies and emotional regulation in a controlled, interactive environment.

AI-driven platforms can support students in building confidence and a positive self-identity by offering personalized feedback and scaffolding. For example, AI tools can help students practice communication and organization skills, bolstering their sense of belonging and engagement in learning environments.

AI can serve as a practice partner in scenarios like conflict resolution and ethical decision-making. By simulating social interactions, AI helps students build and reinforce relationship skills, promoting responsible decision-making and community engagement.

Critical Thinking with AI

AI stimulates students' curiosity and adaptability in problem-solving while teaching them to reflect on AI's limitations. AI offers both opportunities and challenges that users can consider and learn from.

Students can investigate biases inherent in AI tools and their societal impacts. By exploring how AI systems might perpetuate stereotypes or incomplete narratives, learners gain a deeper understanding of systemic issues and the importance of equitable technology use.

AI provides a platform for students to practice resolving complex social dilemmas. Through role-play or interactive scenarios, students can analyze various outcomes, fostering a nuanced approach to making responsible and ethical choices.

Engaging with AI tools encourages students to think critically about when and how to rely on technology. By teaching students to discern between situations where human judgment is paramount and those where AI can enhance efficiency, educators help them develop a balanced approach to technology use.

AI can empower learners to navigate the digital landscape responsibly, contributing to their growth as thoughtful and adaptable individuals.

AI as a Partner
AI is to be considered a “partner” in the learning process (where/when appropriate), and not a total solution to educational needs. AI supports human teaching and learning but cannot replace educators.

AI as a Powerful Emergent Technology
Whenever burgeoning and influential technologies are introduced to society, educators, library users, and students have a chance to weave new resources into their learning and daily life while the technologies are at their most foundational. Generative AI is expected to grow significantly in the coming years, and our Wisconsin residents have a unique opportunity to grow alongside it and learn how to responsibly use it as an emergent technology.

Inquiry-Based Learning
AI aids in developing skills that enhance student research capabilities by expanding their reach to explore knowledge and discover new content, it presents new pathways for critical thinking, analysis, and information examination.

Human-Centered AI Approach (H > AI > H)
The “H > AI > H” (Human > Artificial Intelligence > Human) mnemonic tool is a reminder that responsible AI use begins with a carefully developed prompt to garner a relevant AI response, followed by examining the information gathered and then implementing it in practice. This three-part, simple-to-remember concept (borrowed from Washington State's AI guidance, 2024) can be memorized and utilized by every Wisconsin resident with ease; just remember "H > AI > H"! It is crucial to maintain a human-centered approach, ensuring that AI complements rather than replaces the interpersonal connections essential for social emotional learning (SEL) development.

Partner Engagement and Communication

Engaging all partners is essential for successful AI integration in schools. This includes:

Parents/Guardians
Host informational sessions and workshops to educate parents about AI technologies, their benefits, and potential concerns. Establish regular communication channels to provide updates and resources.

Students
Organize presentations and student-led discussions to introduce AI concepts and applications. Incorporate AI-related projects into the curriculum.

Administrators
Highlight AI's potential to support teachers, staff, and students. Offer professional development opportunities focusing on integrating AI tools into instructional practices.

Educators
Provide resources such as online courses, instructional materials, and lesson plans demonstrating how AI can enhance student learning. Encourage experimentation with new AI tools.

School Board Members
Provide presentations on AI's potential benefits, ethical considerations, and implementation strategies. Facilitate open dialogues to address concerns and foster collaboration.

Community Members
Use local media outlets and community organizations to share updates and success stories about AI integration. Encourage community participation in volunteer opportunities, mentorship programs, or advisory boards related to AI.

Library Staff and Patrons
Offer workshops, talks, and educational programs exploring AI's implications. Provide access to resources such as books, videos, and online databases. Understand AI concepts and their societal impact. Facilitate community dialogues where patrons can share perspectives, concerns, and ideas about how they navigate AI's opportunities and challenges, fostering a more inclusive and knowledgeable community.

AI in Education:
A DISTRICT'S RESPONSIBLE APPROACH

The Chippewa Falls Area School District is dedicated to providing students with a comprehensive education, including exposure to emerging technologies like AI. They are committed to guiding both staff and students in the responsible use of Generative AI (GenAI), establishing clear expectations for its integration. The district's website outlines the *why*, the approach, and their commitment to ensuring a safe and effective experience with district-approved tools that enhance, personalize, and transform learning.

Scott Marty, Director of Educational Technology & DAC, shared "On the first day back for staff this year, we informed the staff that two resources would be newly available to them: Google Gemini and Brisk Teaching AI. Along with Canva, which has also added in GenAI features over the last 2 years, our entire staff has access to a number of AI tools with data privacy protections that they can explore safely in accordance with the AI guidelines that we have adopted and made available to them."

Chippewa Falls Area School District is located in Northwest Wisconsin and serves approximately 4,700 students across one high school, one middle school, and six elementary schools.

Ethics & Data Privacy

Integrating ethical considerations into every stage of AI use in education is essential, and this extends beyond the classroom to encompass public libraries and their users. Safeguarding the data of all users, including students and library users, is critical. School districts and public libraries should review existing policies and processes to incorporate AI-related language that reinforces ethical considerations as well as data privacy concerns in key areas.

Current AI is built upon a knowledgebase containing systemic problems, including bias and inaccuracies. While eliminating bias from these tools may be beyond the scope of K-12 and public library use, teaching all stakeholders to identify and mitigate biases is crucial. Educators and public library professionals should work to promote equity among and between all users.

Balancing the benefits and risks of AI, addressing biases and promoting equity among students and library users, and protecting the data privacy of all users is critical to the successful utilization of AI as a tool. Promoting AI, information, and digital literacy efforts to guide educators, students, public library professionals and public library users in the critical examination of AI-generated is essential. Educating everyone about the inherent risks to data privacy while utilizing AI will help ensure safe and engaging use of AI in educational spaces like schools and public libraries.

Ethical considerations and data privacy are fundamental in the integration of AI within educational environments. When applied to Social Emotional Learning (SEL), these considerations become even more critical due to the sensitive nature of emotional and social data. Educators must explicitly address the differences between real-life and AI-driven interactions to help students …

- understand and manage their expectations and emotions
- discuss the potential risks of engaging with AI tools, such as emotional detachment or dependency, and how to mitigate these risks through balanced use
- teach students about the durability of digital information and the importance of protecting personal data when interacting with AI systems;
- equip students with the skills to identify and respond to online threats, ensuring a secure digital experience.

Educators, students, and library users should critically analyze AI outputs, recognizing potential biases and understanding their implications for diverse communities. They should use AI as a tool to foster equity by examining how

biases in technology affect different demographic groups and encouraging conversations about systemic fairness and inclusivity.

By embedding these ethical considerations into SEL-focused AI practices, educators and public library professionals can create a safer, more equitable learning environment that respects all user's privacy while leveraging AI's potential to enhance emotional and social learning. Continuous evaluation and collaboration among stakeholders will be essential to address emerging ethical challenges as AI technologies evolve.

Data Considerations for School Districts and Public Libraries

Data guidelines should be incorporated into existing district and library policies.

Responsible Access to and Use of Data

- **COPPA** (Children's Online Privacy Protection Act): This federal law regulates the online collection of personal information from children under 13.
- **FERPA** (Family Educational Rights and Privacy Act): This federal law protects the privacy of student education records.
- **State Statutes**: Wisconsin has specific laws regarding the confidentiality of library records (Wisconsin Statutes Chapter 43.30) and the protection of personal information (Wisconsin Statutes Chapter 134.98).
- **Prohibition on using data to improve the underlying AI model:** AI companies cannot use student or public library user data to train or improve their AI systems without explicit consent.
- **Data deletion upon contract termination:** All student and public library user data must be permanently deleted from the AI system upon termination of the contract or account.
- **No third-party data sharing:** AI providers cannot share student or library patron data with any third parties without explicit consent.

The Student Data Privacy Consortium (SDPC):

Schools and libraries should familiarize themselves with the resources and guidance provided by the Student Data Privacy Consortium (SDPC). The SDPC is a collaborative of schools, districts, state agencies, and vendors working together to address student data privacy concerns. They offer valuable resources such as:

- **National Data Privacy Agreement (NDPA):** A standardized privacy agreement that streamlines contracting with edtech vendors.
- **Global Education Security Standards (GESS):** Security benchmarks for edtech providers to safeguard student data.

Academic Integrity

The introduction of AI tools into educational settings necessitates a clear understanding of their ethical use. Schools and libraries must clearly document expectations regarding the use of AI in research, coursework, and curriculum development. This includes providing guidelines on documentation, attribution, and citation when AI is used to generate text, images, or other content. While tools to detect the use of large language models exist, they are often inaccurate and should not be relied upon as the sole method of ensuring academic integrity. Instead, the focus should be on educating students and staff about responsible AI usage. This includes promoting awareness of copyright policies and citation guidelines, ensuring that all individuals understand how to properly attribute AI-generated content and avoid plagiarism.

It's essential to emphasize that AI should be used as a tool to enhance, not replace, human thinking and creativity. Promote the concept of "human-in-the-loop" or "human-AI-human" systems, where humans are actively involved in the AI process, guiding, evaluating, and refining the output generated by AI tools.

Empowering Minds, Protecting Privacy: Ethical AI Practices

- Responsible Acceptable Use Policies
- Code of Conduct & Academic Integrity Policies
- Digital Citizenship Standards & Curriculum
- Transparency & Consent
- Data Encryption & Storage
- Copyright Policies & Citation Guidelines
- Digital Equity & Student Access Policies
- Vendor Compliance
- Continuous Monitoring & Improvement

Ethical AI:
SAFEGUARDING PERSONAL AND DISTRICT DATA

The Green Bay Area Public School District's (GBAPS) Artificial Intelligence Guidelines for Use document is a model for clearly articulating ethical considerations regarding the use of AI in education. GBAPS advocates for responsible use and encourages critical thinking about data privacy before using AI tools. The guidance document also promotes secure AI integration by endorsing vetted tools that align with the district's data privacy practices.

The Green Bay Area Publics School District is located in Northeast Wisconsin, and, with more than 18,000 students, it is the fourth largest public school district in the state. The district includes 39 schools.

Security & Infrastructure

Secure and successful AI integration requires robust infrastructure, technology, and accessibility. Review the essential components to ensure the safety of educators, student public library professionals, and public library user privacy, when implementing the use of AI.

Essential Components:

	Restrict access to student data to authorized personnel.
	Remove personally identifiable information from datasets.
	Conduct comprehensive evaluations of AI implementations. Define specific retention periods for student data.
	Provide comprehensive staff training on student data privacy.
	Develop and maintain a robust data breach response plan.
	Invest in high-speed internet infrastructure.
	Use cloud platforms for flexible computing power & storage.
	Deploy scalable and secure data storage solutions.
	Invest in user-friendly AI development platforms & frameworks.
	Ensure compatibility between AI applications & LMS platforms.
	Assess the compatibility of existing hardware infrastructure.
	Prioritize the development of AI solutions that comply with accessibility standards.

Professional Development

Training for K12 and Public Library Faculty

Professional development for K-12 educators and public library personnel is crucial for effectively integrating artificial intelligence into their practice. It equips them with the necessary skills and knowledge to utilize AI tools responsibly and innovatively, enhancing teaching and library services. Continuous training ensures they stay updated with the latest advancements and ethical considerations, fostering an environment where AI can be used to its fullest potential to benefit students and patrons.

There are 5 pillars involved in this AI Professional Development that must be addressed.

---

5 Training Pillars for K12 Educators

1. **Understanding AI and Machine Learning Basics**
2. **Integrating AI into Subject Areas**
3. **Hands-On AI Experiences**
4. **Collaborations and Networking**
5. **Continuous Learning and Adaptability**

Understanding AI and Machine Learning Basics

1. Educators need foundational knowledge about AI and machine learning, including how these technologies work, their capabilities, and their limitations. This foundational knowledge helps teachers feel more confident incorporating AI topics into their curriculum.

Teachers should also understand how AI can simulate social scenarios, provide feedback, and support emotional regulation. For example, AI tools can offer students virtual environments to practice self-awareness and emotional management skills. Before introducing AI tools, educators should ensure students have the foundational SEL skills to engage with technology responsibly, such as

understanding the differences between AI-driven interactions and real-life social experiences.

- Online tools and platforms that could be utilized to facilitate effective learning in this space include but are not limited to the following:
  - **Google AI Education** - Google provides various resources and tools aimed at educating about AI, including simple explanations of machine learning concepts and interactive experiments using AI.
  - **Microsoft Learn** - Offers learning paths specifically designed around AI education, including modules on AI ethics, machine learning, and data science.
  - **TED-Ed** - Features engaging educational videos that can introduce AI and machine learning concepts in a very accessible way, perfect for sparking interest among educators.

Integrating AI into Subject Areas

Professional development should include strategies for integrating AI concepts into various subject areas, not just computer science. This could involve using AI examples in math problems, discussing the impact of AI on historical events, or exploring AI in science projects.

Encourage educators to use AI to create role-play scenarios in subjects such as social studies, where students can explore conflict resolution and ethical decision-making in historical or contemporary contexts. Provide strategies for scaffolding lessons to support students with varying SEL skill levels, ensuring equitable access to the benefits of AI.

- Online tools and platforms that could be utilized to facilitate effective learning in this space include but are not limited to the following:
  - **Desmos** - An AI based graphing calculator that can be used to demonstrate the power of algorithms and data in solving complex math problems.
  - **PBS Learning Media** - Offers a variety of resources, including interactive lessons on various subjects including technology and society, which could be used to discuss the historical impact of AI and its implications for the future.
  - **Zooniverse** - A platform for citizen science projects that often use AI to help analyze large sets of data, making it a great tool for science educators to explore real-world applications of AI.

Hands-on AI Experiences

Teachers benefit from hands-on experiences with AI tools and platforms, which they can then bring into the classroom. This includes simple programming environments, AI experiment tools, and resources that allow students to interact with AI technologies.

Hands-on sessions should include tools that allow students to practice SEL competencies, such as AI-driven journaling apps for emotional self-monitoring or virtual reality environments for practicing social skills. Use AI tools like chatbots to help students practice communication skills, with educators guiding them on how to use these interactions to enhance real-world relationships.

- Each of these tools provides an engaging way for students to interact directly with AI technologies, enabling a deeper understanding of the subject through interactive learning and creativity:
  - **Google AI Experiments**: Google's platform for AI experiments makes AI accessible through hands-on projects. Tools like "Teachable Machine" allow students to train simple models with a webcam.
  - **Machine Learning for Kids**: An easy-to-use tool to create machine learning projects that are linked with Scratch, providing a great way to introduce AI concepts to students.
  - **TensorFlow Playground**: An interactive visualization of a neural network that users can tweak to better understand the basics of machine learning.

Collaboration and Networking

Building communities of practice around AI education allows educators to share resources, ideas, and experiences. Training should encourage participation in networks, workshops, and conferences dedicated to AI education.

Encourage educators to collaborate on developing AI-supported SEL curricula, sharing successful approaches to teaching digital literacy, online safety, and ethical AI use. Collaborative efforts can also focus on addressing the risks of AI over-reliance, such as cognitive atrophy and social isolation.

- Here are some notable educator networks, workshops, and conferences focused on AI education or integrating AI into K-12 education based in Wisconsin:
  - **SLATE--The SLATE Annual Conference**, which stands for School Leaders Advancing Technology in Education, is a significant educational

technology event held at the Kalahari Resort in Wisconsin Dells, WI. This conference focuses on the use of technology in education, attracting educators, administrators, and technology leaders. It includes keynote speeches, a variety of sessions on educational technology, and opportunities for networking and professional development. The conference is known for its comprehensive agenda that covers innovative teaching resources and cutting-edge technologies, making it a valuable event for professionals looking to enhance their educational practices through technology.

- **CESA based workshops & trainings**--all 12 CESAs across the state of Wisconsin take part in the CESA Instructional Technology Services Committee (CITSC) which is a hub for professional learning opportunities that promote and enhance digital learning proficiencies (including AI in Education) for Wisconsin Educators. Reach out to your local CESA for more information and program scheduling.

- **WEMTA--the Wisconsin Educational Media & Technology Association** is a professional association in Wisconsin dedicated to supporting librarians and educators. Its focus is on advancing educational and media technology initiatives and fostering professional development through conferences, workshops, and other resources.

- **WDLC--The Wisconsin Digital Learning Collaborative** is an initiative established to provide equitable access to high-quality online education in Wisconsin. It serves as a central resource for school districts, CESAs, charter schools, and private schools, offering support in online and blended learning practices. The WDLC collaborates with the Wisconsin Virtual School, Wisconsin e-School Network, and the Department of Public Instruction to deliver comprehensive online courses, professional development, and planning strategies for schools and districts. The collaborative aims to share resources, implement quality learning strategies, and foster a statewide community focused on enhancing online and blended educational practices.

Continuous Learning and Adaptability

Given the rapid development of AI, educators must adopt a mindset of continuous learning. Professional development should emphasize resources for staying updated on AI advancements and pedagogical approaches, highlighting the importance of adaptability in teaching practices.

Emphasize continuous improvement in integrating AI for SEL by staying informed about new tools and best practices. Professional development should include case studies and role-playing exercises that model how AI can support SEL in diverse classroom settings. Regularly revisit and refine AI use policies, ensuring they align with both SEL goals and technological advancements. This includes ongoing

evaluation of AI tools for their developmental appropriateness and impact on students' SEL growth.

- These resources provide information on the latest trends in AI, offer professional development opportunities, and share effective teaching strategies that incorporate AI technology:
  - **ISTE (International Society for Technology in Education**) - ISTE offers a variety of resources, including webinars, courses, and articles that focus on integrating technology into education effectively. Their offerings are updated regularly to include the latest in educational technology, including AI.
  - **EdSurge** - This site provides news, research, and tools for educators. They have a dedicated section on AI in education which covers the latest developments and practical ways to use AI tools in the classroom.
  - **AI4K12 Initiative** - This initiative is working to develop guidelines for what students should know about AI. It provides resources and curricula recommendations to help teachers understand and teach AI concepts at appropriate grade levels.

Introducing Educators and Library Professionals to available tools and resources for each pillar of AI will allow for personalized professional development that fits the needs of each individual and their role.

Roadmap to District Implementation

Training for K-12 and Public Library Faculty: Professional development for K-12 educators and public library personnel is crucial for effectively integrating artificial intelligence into their practice. It equips them with the necessary skills and knowledge to utilize AI tools responsibly and innovatively, enhancing teaching and library services. Continuous training ensures they stay updated with the latest advancements and ethical considerations, fostering an environment where AI can be used to its fullest potential to benefit students and patrons. To ensure AI is integrated responsibly and strategically to enhance the core of instruction, districts should consider using the suggested implementation flowchart as a guide. A successful integration of AI should be anchored to a shared vision for teaching and learning, involve input and feedback from various stakeholders in the community, and include plans for addressing potential risks. The flowchart, with its emphasis on team formation, vision alignment, policy review, and professional learning for all staff, provides a practical framework that reflects these essential elements, promoting a thoughtful and structured approach to AI integration.

District Implementation	Links to PD Resources to Support Implementation
District or Library Implementation Team Action Item: Form a district or library implementation team *Questions to consider:* • Who should you consider to be a representative on the team? • Do you have a representative from each partner creating a cross-functional diverse team (i.e., teacher, administrator, technology, library media, etc)?	AWS Cloud Readiness Assessment AI Readiness Framework from aiEDU
Collective team learning around AI in Education **Action Item: Engage in collective professional learning with the implementation team and establish norms.** *Questions to consider:* • How are we defining AI? • Have we identified the potential benefits and risks for AI implementation?	UW Research Guide Generative AI for Educators : Google AI for education | Life skills | Khan Academy Glossary of Artificial Intelligence Terms for Educators
Vision for AI implementation/Use Action item: Align AI implementation to district or library vision and strategic plans. *Questions to consider:* • What problem are we trying to solve with implementing AI? • What is the purpose for implementing AI?	ISTE Tips for Leaders AI Assessment Scale

District Implementation	Links to PD Resources to Support Implementation
AI District or Library Policy and Procedures Action item: Review current board policies and procedures around AI *Questions to consider:* • Do the current policies ensure data privacy, and civil rights and comply with federal and state regulations like FERPA, COPPA, IDEA, and ADA? • Which policies need to be reviewed? (e.g., Student Acceptable Use Policy) • Do recommendations need to be made to revise or amend board policies? • What procedures or administrative guidelines should accompany the policies? (e.g., ethics)	Student Guide for AI Use from AI for Education UW Research Guide Policy and Guidance from TeachAI Setting Conditions for Success from ISTE
Cybersecurity/Privacy Action item: Review cybersecurity and student privacy procedures for your district or library around AI *Questions to consider:* • Are updates to the current procedures needed to meet the needs for AI implementation?	K-12 Generative AI Readiness Checklist October 11 2023 V1.1 See section titled 'Data & Student Privacy' within this document
AI Tools Exploration Action item: Pilot and/or explore AI tools with your implementation team *Questions to consider:* • Is this tool(s) aligning to the vision? • Does your district or library have a vetting process for technology adoption? • Does your district or library's data privacy vetting process include ensuring that Gen AI is only used	AI for Education questions for vendors Link to vetting flowchart Vetting Generative AI Tools for Use in Schools from the

District Implementation	Links to PD Resources to Support Implementation
by individuals who meet the vendor's stated age requirements? • Have you considered the sustainability and budget of the tool? • How is it being implemented? • Have you ensured that the tool does not collect or train on student data? • Have you ensured the intellectual property rights remain with the school, library, or tribal community?	Future of Privacy Forum
Professional Learning for ALL staff Action Item: Create professional learning opportunities for all partners. *Questions to consider:* • Have you involved your educators and other partners in your professional learning planning? • Have you included both professional practice (i.e., Understanding AI Fundamentals, Integrating AI in Practice, AI Literacy in Education, Addressing ethical and social implications of AI, Modeling AI with Students) and instructional practice (i.e., AI Literacy for Student Use) learning opportunities? • Have you provided professional development opportunities at a pace that allows educators to absorb and apply new knowledge effectively? • Have you included opportunities for educators to collaborate and share best practices? • Does your professional learning plan include ongoing support and coaching? AI Empowerment:

EQUIPPING TEACHERS WITH AI PROFESSIONAL DEVELOPMENT

The Sun Prairie Area School District's professional development (PD) model provides educators with PD courses that have clear expectations, pre-knowledge surveys, opportunities to practice and reflect with AI tools. The integration of Must-Do's and May-Do's in addition to exit slips provides opportunities for educators to demonstrate their understanding of the implementation of AI within the classroom.

The Sun Prairie Area School District is a suburban school district outside of Madison, Wisconsin that services over 8.400 students in grades 4k-12. The district includes 15 schools; nine elementary schools, three middle schools, two high schools, and an alternative learning school.

Sun Prairie Area School District: **Staff AI Literacy Introduction Course** and **Staff AI Literacy Part II**

Curriculum and Pedagogy

Human Capacity

In preparing educational communities to be responsible AI users, it is essential to create instructional practices and implement policies that model the responsible and intentional use of AI technology. Providing staff training and staying abreast of technology is essential to the successful use of AI in classroom settings.

AI Literacy Across Grade Bands

Elementary

Engage parents and caregivers in understanding how AI is used in the classroom and how it can support their child's academic growth. It is important that students use real-world AI applications during instruction. This practice fosters hands-on experience and critical thinking regarding AI generated content.

At the elementary level, integrating AI into Social Emotional Learning (SEL) can help young learners develop foundational emotional and social skills. AI tools, such as virtual assistants or interactive platforms, can provide opportunities for students to practice recognizing and managing their emotions through guided activities.

AI-supported virtual environments can offer low-risk simulations where students practice coping strategies and build self-regulation skills. Interactive AI tools can foster confidence by guiding students through personalized learning tasks, helping them to identify their strengths and develop a positive self-identity. Role-playing scenarios facilitated by AI can help students practice basic social interactions, such as sharing or resolving simple conflicts. AI-based simulations can allow students to engage in more complex social problem-solving, such as resolving group conflicts or practicing leadership skills in a safe environment.

Middle Grades

Equip educators to instruct and support students' independent, responsible, and safe use of AI technology. Extending beyond the classroom to include libraries, homes, and peer interactions. AI should be taught across disciplines, combining it with subjects like mathematics, computer science, social studies, and ethics.

In middle school, AI can be leveraged to build on students' growing autonomy and social awareness. Tools that promote collaborative learning and self-reflection are particularly useful. AI-powered reflection tools can help students track their emotional states over time, fostering greater self-awareness. Personalized AI feedback can encourage students to set academic and personal goals, enhancing their ability to see themselves as lifelong learners.

High School

Provide guidance to help students embrace AI as a learning partner to navigate academic and social communities. AI should be integrated into all subjects and could also be taught as a standalone subject where students learn to build and understand AI systems, maximizing the potential of AI in educational settings. Students, educators, and families should understand how to ethically use AI technology and understand the benefits that AI provides to increase creativity, collaboration, access, critical thinking, and research.

For high school students, AI can support more sophisticated SEL competencies, preparing them for real-world challenges. AI tools like virtual coaches or journaling apps can offer insights into managing stress and making informed decisions about emotional well-being. Advanced AI platforms can provide tailored mentorship experiences, helping students explore career pathways and reinforcing their self-efficacy in academic and social contexts. Students can use AI to simulate ethical dilemmas and engage in reflective discussions about societal issues, enhancing their ability to navigate complex social dynamics and contribute positively to their communities.

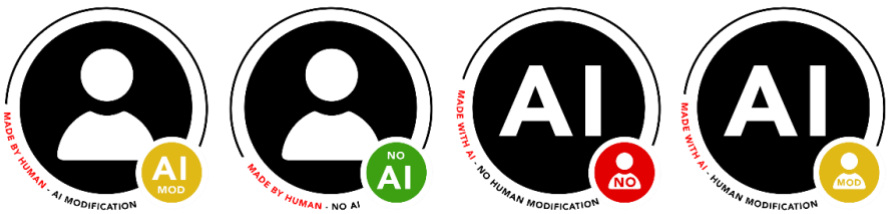

Elevating Instruction:

A TRANSPARENT APPORACH TO AI IN THE CLASSROOM

The Pewaukee School District's encourages educators to openly communicate the level of AI involvement in classroom resources. By using clear visual indicators, they promote responsible AI use and set a strong example for students. The district empowers educators to effectively integrate AI into their environments by providing clear guidelines and visual tools. By promoting transparency, the district promotes AI engagement to build trust with students and to foster critical thinking and empowerment within students to evaluate information.

The Pewaukee School District is located in the southeastern part of Wisconsin. They service approximately 3,000 students within five schools which are all located on the same campus.

Monitoring, Evaluation, and Continuous Improvement

Careful monitoring and continuous improvement are essential for harnessing AI's power responsibly and effectively.

Monitoring:

- Track Usage Data: monitor how students and teachers interact with AI tools. This includes frequency, types of interactions, and time spent.
- Identify bias: Look for instances where AI recommendations or content may favor certain demographics or learning styles.
- Privacy considerations: Ensure student data collected by AI systems is secure and anonymized according to regulations.

Evaluation:

- Learning outcomes: Compare student performance using AI tools with traditional methods. Consider standardized test scores alongside factors like student engagement and critical thinking skills.
- Teacher feedback: Gather feedback from teachers on how AI integration is impacting their workflow, classroom dynamics, and overall effectiveness.
- Student surveys: Survey students about their experience with AI tools. Gauge their satisfaction, perceived learning gains, and suggestions for improvement.

Improvement:

- Iterative development: Based on usage data and feedback, refine the policy and guidance to better address needs for staff and students.
- Teacher training: Provide ongoing training for teachers, maximizing their potential to effectively integrate AI tools into their lesson plans.
- Focus on fairness: Develop strategies to mitigate bias in AI and ensure all students have equal access to the benefits of AI-powered learning.

SEL-Specific Risks and Mitigation Strategies

The integration of AI into Social Emotional Learning (SEL) presents unique risks that must be carefully monitored and addressed to ensure students' well-being and educational outcomes. Key risks include distinguishing real-life from AI interactions, managing the potential for addiction or over-reliance on AI, and ensuring students develop meaningful human connections.

1. Distinguishing Real-Life from AI Interactions

AI tools can blur the line between real and virtual interactions, which may impact students' ability to navigate real-world social situations. Educators should:

- **Explicitly Teach the Differences:** Help students understand the distinctions between AI-generated responses and human interactions. This includes discussing the limitations of AI in recognizing emotional nuance and fostering genuine empathy.
- **Encourage Real-World Challenges:** Guide students to seek interpersonal experiences and real-world problem-solving opportunities beyond the controlled environment of AI simulations.

2. Managing AI Addiction and Over-Reliance

The engaging nature of AI tools can lead to over-reliance, potentially hindering students' cognitive and social development. To prevent this:

- **Implement Preventative Strategies:** Work with students and families to develop intentional usage practices, setting limits to prevent excessive dependency on AI tools.
- **Promote Balanced Use:** Teach students to recognize when it is appropriate to rely on AI for support versus when human interaction and problem-solving are more beneficial.

3. Building Human Connections and Emotional Resilience

While AI can support SEL, it cannot replace the value of human connection in emotional development. Strategies include:

- **Modeling Human-Centered AI Use:** Educators should demonstrate how AI tools can complement, rather than replace, meaningful human interactions. For instance, AI can be used to practice communication skills that are later applied in real-life settings.
- **Developing Digital Citizenship Skills:** Equip students with the knowledge to navigate online environments safely, emphasizing the importance of maintaining a responsible and respectful digital presence.

By actively monitoring these risks and implementing targeted strategies, educators can ensure that AI serves as a supportive tool for SEL while safeguarding against its potential downsides. Continuous feedback and

collaboration among educators, students, and families are essential for refining these practices and maximizing the benefits of AI in SEL contexts.

Additional tips:

- Start small: Begin by implementing AI in a controlled setting before a full-scale integration.
- Focus on specific goals: Clearly define the objectives and roles AI will have in the district and classroom, such as personalized learning or early intervention.
- Collaboration is key: Involve educators, students, and parents in the implementation of AI to create a well-rounded experience.

By following these steps, you can establish a framework for monitoring, evaluating, and continuously improving the use of AI in an educational setting. Remember, AI is a tool to enhance learning, and its success hinges on ongoing monitoring and refinement.

AI Evolution:

CONTINUOUS LEARNING AND ADAPTATION

The Independence School Districts is pioneering the responsible use of AI in education by leveraging AI as a tool to enhance teaching and learning through educator and student empowerment.

The district is equipping educators with tools and the knowledge to effectively integrate AI into their classrooms. By fostering a culture of innovation and experimentation, they are inspiring educators to explore new possibilities.

Independence School District is committed to using AI to personalize student learning experiences. High school educators are training students to critically analyze AI-generated content, comparing the impact of vague and precise prompts on AI responses. Additionally, the district is piloting AI integration within math curriculum. Two classes are completing the same unit, one using traditional methods and the other with AI support. Students from both classes will take the same assessment, allowing for a comparison of student progress.

The Independence School District is located within the hills of the Trempealeau Valley in West Central Wisconsin serving approximately 450 students.

Appendix

Terms and Definitions

1. Artificial Intelligence (AI)

The simulation of human intelligence processes by machines, particularly computer systems. These processes include learning (the acquisition of information and rules for using it), reasoning (using rules to reach approximate or definite conclusions), and self-correction.

2. Machine Learning (ML)

A subset of AI that involves the use of algorithms and statistical models to enable computers to improve their performance on a specific task through experience. In the classroom, ML can be used for personalized learning experiences.

3. Generative AI (GenAI)

GenAI is a type of AI that uses machine learning to create entirely new data, such as images, text, or audio. GenAI systems are trained on massive datasets and learn to identify the underlying patterns within that data to generate new content.

4. Natural Language Processing (NLP)

A branch of AI that focuses on the interaction between computers and humans through natural language. NLP enables machines to understand, interpret, and respond to human language in a meaningful way, which can be useful in educational tools like chatbots or language learning apps.

5. Intelligent Tutoring Systems (ITS)

Computer systems that provide personalized instruction or feedback to learners, adapting to their individual needs and learning styles. ITS can assess a student's understanding and adjust the difficulty of tasks accordingly.

6. Educational Data Mining (EDM)

The process of analyzing educational data to understand student behaviors and improve educational outcomes. EDM techniques can help educators identify at-risk students and tailor interventions to support them.

8. Adaptive Learning

A technology-based approach that personalizes learning experiences based on an individual student's strengths, weaknesses, preferences, and pace. Adaptive learning systems use AI to modify content and assessments in real-time.

8. Robotics

The branch of technology that deals with the design, construction, operation, and application of robots. In the classroom, robotics can be used to teach coding, problem-solving, and critical thinking skills.

9. Virtual Assistants

AI-powered software agents that can perform tasks or services for individuals based on voice commands or text input. In education, virtual assistants can help manage schedules, answer questions, and provide reminders for students and teachers. Public libraries are also integrating virtual assistants for reading recommendations and assistance on websites.

10. Augmented Reality (AR)

An interactive experience that combines the real world with computer-generated content. AR can enhance learning by providing immersive experiences, such as virtual field trips or interactive science experiments.

11. Gamification

The application of game-design elements and principles in non-game contexts, such as education, to enhance engagement and motivation. AI can be used to create adaptive learning games that respond to student performance.

12. Ethical AI

The study of the moral implications and responsibilities associated with the development and use of AI technologies. Educators and public library professionals must consider ethical issues, such as bias in algorithms and data privacy, when integrating AI into the classroom.

13. Data Privacy

The aspect of information technology that deals with the proper handling of sensitive data, including the collection, storage, and sharing of personally identifiable information. Educators and public library professionals must ensure that AI tools comply with data privacy regulations to protect students' information.

14. Digital Literacy

The ability to effectively and critically navigate, evaluate, and create information using a range of digital technologies. Teaching digital literacy is essential in preparing students and the community to understand and engage with AI technologies.

15. Computational Thinking

A problem-solving process that involves breaking down complex problems into manageable parts, recognizing patterns, and developing algorithms. Computational thinking is a foundational skill for understanding AI and coding.

16. Bias in AI

The presence of systematic and unfair discrimination in AI algorithms, often resulting from biased training data or flawed programming. Educators as well as public library professionals should teach the skills needed to recognize and address bias in AI systems.

17. Data Security

The practice of protecting digital information from unauthorized access, corruption, or theft throughout its lifecycle. In the educational and public library environments, ensuring data security is crucial to safeguarding personally identifiable information and maintaining trust in AI systems.

18. Infrastructure

The underlying framework and technology that support the deployment and operation of AI systems. Infrastructure includes hardware, software, networks, and data storage solutions that facilitate the integration of AI tools..

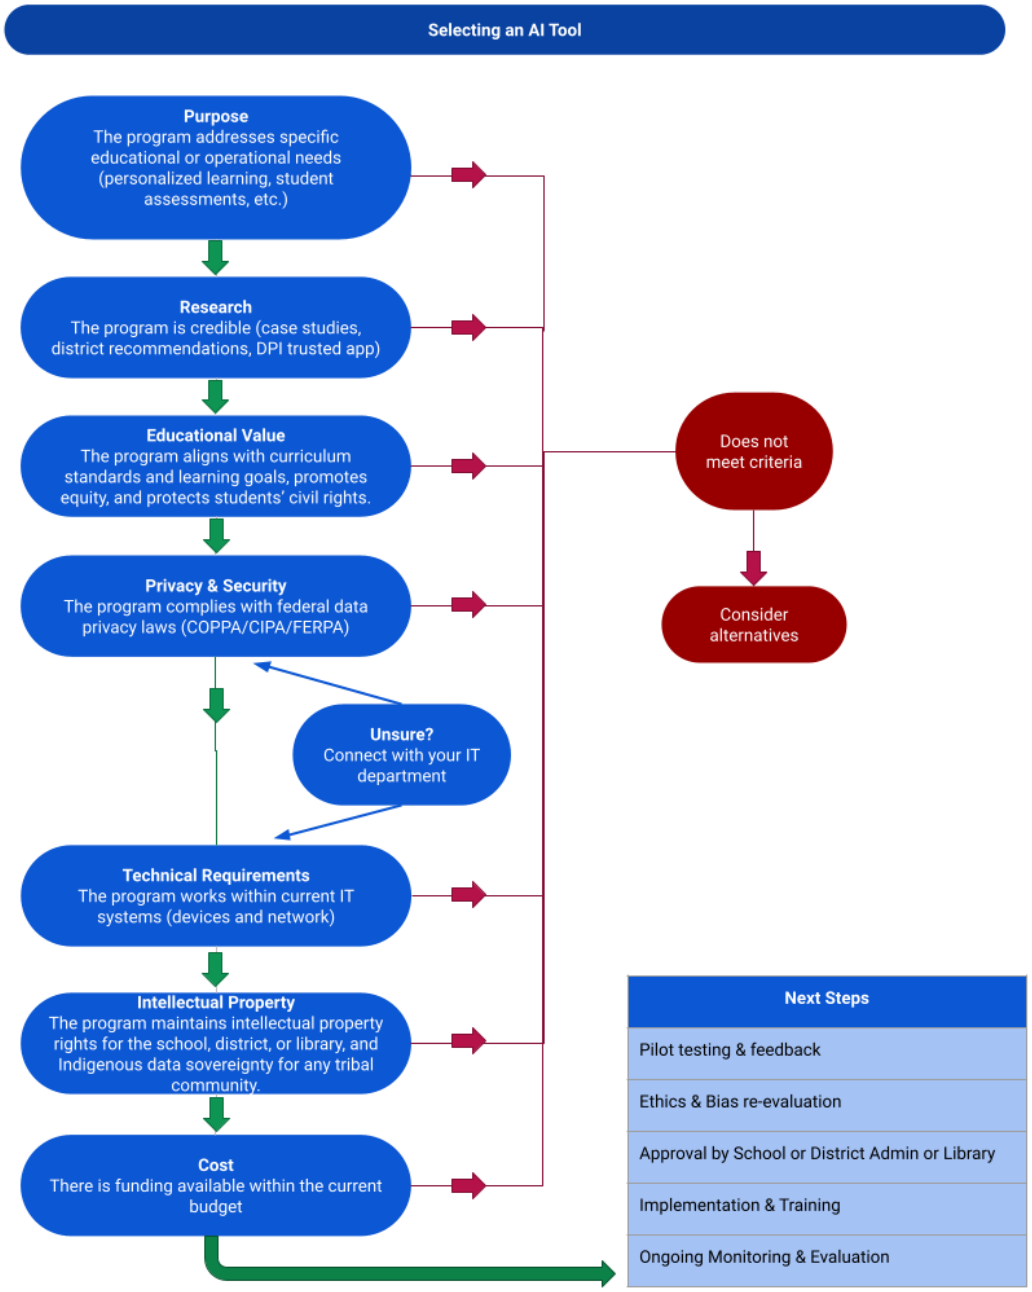

19. Cybersecurity

The practice of protecting systems, networks, and programs from digital attacks. Educators and public library professionals must be aware of cybersecurity measures to protect sensitive student data and ensure safe use of AI technologies in the classroom.

20. AI Hallucinations

GenAI systems are susceptible to producing outputs that deviate from intended results. These deviations, known as AI Hallucinations, can manifest as inaccurate, misleading, or entirely fabricated content. Due to the potential for realistic and convincing hallucinations, critical evaluation of all GenAI outputs is essential.
